The Knogo™ WAM detection system provides the widest corridors in the market today to detect EM security strips. Depending on the library’s requirements, antennae can be placed from 36” to 60” apart (WAM 5875). The WAM system ensures the best protection for the bookstore’s merchandise by extending the detection field above and beyond the detection corridor.

The WAM system features an audible and visible alarms as well as an optional built-in digital patron counter. Electronic outputs add further security options, such as a customizable voice message. An alarm signal can also trigger a video recorder.

WAM antenna panels have an attractive finish that can be customized to match any library’s décor, and the side panels can be printed with the school’s logo, hours of operation, etc.

**FEATURES**

- Detects all industry-standard EM security tags
- Full coverage up to 6’ in height
- Corridor widths from 36” to 60”; Barrier-Free and ADA compliant
- Optional Integrated Digital Patron Counter
- Printable Plexiglas S-Panel
- Single, dual, or multiple corridors
- Electronic output to add additional security features (e.g., CCTV integration)
- Audible and visible alarm
- Direct mount or buried conduit installation
- Standard wood-grain finish: Kensington Maple
