

INSIGHT™ RFID SYSTEM

The Insight™ RFID Detection System ensures optimum protection of all secured items, including magnetic media.

Sentry uses ISO compliant, industry standard RFID technology. Sentry systems are compatible with other library security and RFID technologies. Programmed to ignore the presence of materials from other libraries or retail stores, the system detects and identifies only library items that have not been properly checked out.

GateKeeper™, the software included with Insight™, alerts staff to an alarm event and identifies the item(s) not properly checked out. In addition to monitoring alarm events and reporting on event data, GateKeeper™ is also used to activate the system's self-tuning feature. GateKeeper™ can be installed on any library PC.

Voltage 110/120 V or
220/240 VAC
(50-60 Hz)

Dimensions H: 69"
W: 29"
D: 2.6"

Antenna
Weight 95 lbs

Standard wood-grain finish:

The Sentry Insight™ RFID Detection System is available in single, dual, and multiple aisle configurations. The system produces an audible and visible alarm and features electronic outputs that add additional security options, such as a customizable voice message and integration with CCTV systems.

Insight™ antenna panels have an attractive finish that can be customized to match any library's décor and the side-panels can be printed with the library's logo, hours of operation, etc.

FEATURES

- ✓ Reliable detection and theft prevention
- ✓ Remote administration; LAN/WiFi connectivity for network integration
- ✓ Corridor widths from 36" to 39"; Barrier-Free and ADA compliant
- ✓ Single, dual, or multiple corridors
- ✓ Electronic output to add additional security features (e.g., CCTV integration)
- ✓ Audible and visible alarm
- Direct mount or buried conduit installation
- ✓ Custom color combinations and printable side panels
- Standard Kensington Maple wood-grain finish
